# DATA PROCESSING PIPELINE

- Define local paths
- Call project\_structure
- Define global and project paths
- Manual override to project structure
- Define operation list
- START PROCESSING

## Original Data

```
LOCAL_PROJECT_DIR / project.research_group / project.research_subgroup / project.name / original_data / import.original_data_folder /  
import.original_data_prefix subj_name import.original_data_suffix . import.original_data_extension  
test_ subj_name_OCICA_250 . bdf/vhdr
```

## Imported Data

```
LOCAL_PROJECT_DIR / project.research_group / project.research_subgroup / project.name / epochs / project.epoching.input_epochs_folder /  
import.original_data_prefix subj_name import.original_data_suffix import.output_suffix project.epoching.input_suffix  
test_ subj_name_OCICA_250 _raw . set
```
